Disc Tracker is your personal portable Compact Disc database. CDs are displayed ordered by album title, artist, music genre, and status. You can search for CDs in your collection, and enter a "loan status" to remember who you loaned the CD to or borrowed it from. A new CD can be entered automatically (enter UPC/EAN and remaining data is loaded from the internet) or manually. If you load the data from the internet, the CD cover image is loaded as well. iTunes may do an excellent job of tracking albums and music you've downloaded to your computer, but it doesn't track your physical CDs. Disc Tracker keeps data about your physical collection at your fingertips!

Features:

- Save all your CD data in a convenient database
- See your CD covers on your iPod/iPhone
- Track disc loans
- Rate your CDs
- Search the database by multiple space-separated keywords
- Tilt your iPod to landscape view and view your CD covers in "shelf view" mode.
- Backup and restore your collection to our online backup server
- View your backed up collection at ipod.pressnells.net

```
function calcHeight(iframe_id) { var  
the_height=document.getElementById(iframe_id).contentWindow.document.body.scrollHeight;  
document.getElementById(iframe_id).height=the_height; }    Hmm, you are using a very old  
browser.
```
